PROFILE

An enthusiastic software developer pursuing an MCA in Computer Science at Saurashtra University. Skilled in developing efficient web applications and adept at utilizing AI-based tools and solutions. Passionate about learning new technologies and applying them to solve real-world problems. Dedicated to enhancing technical skills and contributing to innovative projects.

ACADEMIC PROJECTS

Dairy Management System	2024 - 2026
• Technologies Used: • Front-End: Microsoft Visual Studio 2012 (VB.NET) • Back-End: MySQL • Other Tools: Crystal Reports for generating reports	
The Dairy Management System is a software application developed to automate and streamline the operations of dairy businesses. The project was built using Microsoft Visual Studio 2012 (VB.NET) as the front-end, MySQL as the back-end database, and Crystal Reports for generating detailed reports. The system eliminates manual, paper-based tasks by maintaining digital records of sellers, customers, milk transactions, and pricing.	
RLB Business Project (Summary)	2025-2026
• Technologies Used: • Frontend / Backend: C# (Windows Forms / Console) • Database: MySQL (via XAMPP)	
This project is developed in C# with MySQL (via ADO.NET) to manage three core services: manpower supply, heavy vehicle supply, and transportation services. The admin can add and manage employees, drivers, and vehicles, assign them to different jobs, and maintain all related records in the database. It provides a centralized system for efficient handling of services with proper data storage and easy management.
